

VICENTE DE JESÚS BRAVO ANDRADE

Computer Systems Engineer

cel: + 52 229 734 2528 | Email: vicienbravo.777@gmail.com | Web: <https://portafolio-web-vicentecode-dev.vercel.app>

PROFESSIONAL PROFILE

I am a Systems Engineer passionate about Full Stack development and with a growing interest in software architecture. I'm motivated by designing well-structured, scalable, and easy-to-maintain systems, applying patterns like MVC and hexagonal architecture along with SOLID principles and clean architecture. I enjoy understanding the core problem before writing code, and I aim for every technical decision to make sense both for the team and the business. I've worked on web and mobile projects from start to finish, collaborating directly with clients and agile teams, and integrating automation with AI when it adds real value.

PROFESSIONAL EXPERIENCE

Helius Consulting | Rol: Web / Movil Developer

SEP 2025/ JUN 2026

Full Stack Developer with experience in custom web and mobile projects: requirement analysis, development, and production deployment. I have built management systems, reporting tools, coworking platforms, and billing solutions, working on the frontend with React and TypeScript, backend with Node.js, and mobile apps. I integrate and consume REST APIs for service communication. I apply clean architecture, SOLID principles, and MVC and hexagonal patterns. I work under agile methodologies with ticket management, version control, and CI/CD pipeline configuration in Azure DevOps for test automation and continuous deployment. I also integrate AI automation and have experience in direct customer support.

Personal Project | Full Stack Developer — Management System

I designed and implemented a complete appointment management system for businesses like barbershops. The backend is a monolithic REST API in Node.js with Express 5 and TypeScript, using Hexagonal Architecture (Ports & Adapters) to decouple domain, use cases, and infrastructure. I used PostgreSQL with Prisma ORM in a multi-namespace setup, JWT and bcrypt for role-based authentication and authorization, Zod for input validation, and Jest with ts-jest for unit test coverage by layer, with automatic documentation via Swagger. The frontend is built in Next.js with TypeScript with custom components, organized under a feature-based architecture, applying strict separation between logic and presentation (container-presentation pattern) and the DRY principle.

EDUCATION

Computer Systems Engineering

Universidad Jean Piaget 2022-2025

Computer Technician

Conalet Siglo XXI 2019-2022

SKILLS

Languages: Native Spanish | English (A2)

Languages: JS | C# | SQL | HTML | CSS | TypeScript

Frameworks and environments: ReactJs | ReactNative | Express | Expo | Next.js | NodeJs | Tailwind | Nativewind | Git | TanStack Query | Axios | ReactRouter | Zustand | .NET

Professional Skills: Agile methodologies and ticket management | Application deployment in production | Creativity | Clean and hexagonal architecture | Custom software development | Application of MVC design patterns | Automation integration with AI tools | Technical communication with different team and business profiles | Requirements analysis | Development environment management | Build generation and signing for distribution on Google Play (APK / AAB)

Tools: Git | GitHub | Docker | Postman | Swagger | Android Studio | Azure DevOps | Jira | Figma | Cli | PostgreSQL | draw.io | Notion | Prisma | APIs | Azure Pipelines/Devops
